

Battle-Tested. Operator-Made.

ITPIE Platform

AFCEA TECHNET AUGUSTA • AUGUST 2026

**"NETMOD Engineers will not
migrate a base without ITPIE"**

Army Engineering Leadership

Teams need **one place** for real-time **answers**, not many tools.

Despite a stack of monitoring and inventory tools, most network teams still cannot say with confidence what is running on their network right now.

Tools
disagree and
are
incomplete

Inventories
are **stale** and
untrustworthy

Commercial
tools **stop** at
boundaries

Answers
are **limited**
to SMEs

Not knowing costs the mission.

It gets paid in downtime, in rework, in site visits, and in time no one can afford.

\$843K+ per hour

Cost of critical network downtime

40% of outages

Traced to human error, not equipment failure

Migrations
wait on people.

A base cannot move until somebody physically walks it and writes down what is there.

Accreditation
starts at zero.

Every new build re-hardens, re-documents, and re-accredits from scratch.

Threats
hide in the seams.

A device that crosses classification levels stops being traceable at the boundary.

ITPIE Platform

**Network Intelligence,
Management & Automation**

Made for DoD environments. Proven at Army-scale.

**One platform. One sign-in.
One source of truth.**

Eight network capabilities on a shared foundation:

Dashboard

Discovery

Source of Truth

Performance

Events

Telemetry

Security

Intelligence (AI)

Network Solutions for Mission Tempo

Buy, model, integrate, harden, accredit,
migrate to ITPIE inside a budget cycle.
We compress what takes years into
weeks and months.

Works where others stop

Air-gapped operation, cross-domain visibility, and HAIPE integration. Built for your environment, not adapted to it.

The map is the network, NOW

Discovery keeps a source of truth populated live. What operators are looking at and working with is always current and complete.

Ask it in plain language (AI)

AI runs on an onboard GPU, fully disconnected. Operators ask questions in English and nothing leaves the enclave.

Operational in WEEKS

It ships built, so no install step and no integration project standing between purchase and use.

The ATO clock starts ahead

STIG-hardened with accreditation pre-built, so hardening and documentation don't waste time.

Army's NETMOD Success = Enabled by ITPIE

NETMOD modernized the Army network infrastructure over six years, at scale, without operational disruption using ITPIE.

85,000+

network switches

115+

installations across CONUS, SWA, EUR

\$12M+

saved vs. traditional approaches

99%

configuration accuracy

16+

sites per year

Zero

mission disruptions

NETMOD engineers will not migrate a base without ITPIE."

Army Engineering Leadership

Fielded across Army, Navy, Air Force,
USCG, DISA, and the combatant commands.
